DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-3,10-17,20,23-35,38 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over US PAT 7,302,429 to Wanker.

As to claims 1,20,38,39 and, as best understood, 20, Wanker discloses a method for referring customers to a seller of goods and/or services (title), using a computer (fig 1), receiving customer information (col 2, lines 38-43), including contacts with prior dealers and their results (274, as best seen in fig 2F), using the computer to locate the dealers (202, fig 2A), the identity and location of the dealers (fig 2C), using historical data about contacts between a plurality of prospective customers and the dealer (fig 2G, in total but especially box 283), the reason is "located" (fig 2G), it could be servicing, there being no limitation to preclude such an action as the system is used for evaluating merchants,

there are multiple dealers (306, fig 3), the system is used for all dealers, the merchants are displayed including their rankings (311, fig 3), Wanker further discloses using dealer location as a variable (col 7, lines 2-3).

Wanker does not, however, specifically teach using the system for automobile dealerships, specifically disclose getting contact information from the user or specifically disclose using the current user's prior contacts.

It would have been obvious to use the system for automobile dealers as they are merchants and to receive contact information from the user so they could be contacted and further, as the system is shown to take prior contacts of all kinds from customers, it would be obvious to use the current customer's prior contacts into account as the system is shown to do this in the aggregate and the current customer would be one of the "prior contacts" as disclosed.

Wanker further does not specifically mention receiving the identity of each prospective customer, however, it would have been obvious to one of ordinary skill in the art to ask for and receive this information so the customer could be contacted.

As to claims 10,23, the system can be used more than once, thereby meeting the limitations as claimed.

As to claims 2,24, it would be obvious to use the customer's name as this is a good way to identify people.

As to claims 3,25, it would be obvious to use city and state information so the system wouldn't suggest a dealer far away from the customer (it would be most inobvious to suggest a Ford dealer in San Francisco, CA to a user in Miami, FL).

Application/Control Number: 10/054,106

Art Unit: 3689

As to claims 11,29, the information is broken into sets (figs 2A-2G).

As to claims 12,26,30, the system lists all contacts for all reasons, thereby meeting the limitations as claimed.

As to claims 13,31, the different sets of data (from figs 2A-2G) are displayed separately. As to claims 14,32, the sets have links to each other (they are all connected via the same computer system).

As to claims 15,33, it would be obvious to display them in order of preference as this would allow the user to see them in their preferred order.

As to claims 16,17,34,35, Wanker does not teach a link for displaying map location, however, it is old and well known in the art to have an online map and direction generating site (such as www.randmacnally.com), therefore, it would have been obvious to one of ordinary skill in the art to have a link to a map site that gives directions to make it easier for the customer to get to the merchant.

As to claim 27, it would be obvious to order the results in types of contacts so as to give the user the best information. For instance, if the user is buying a car, they could be more interested in the sales than the service, and vice versa.

Claims 18,19,36 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wanker as applied to claims 1-3,10-16,23-35,38 and 39 above, and further in view of US PAT 6,041,311 to Chislenko.

As to claims 18,19,36,37, Wanker does not teach using date of contact for ranking.

Application/Control Number: 10/054,106 Page 5

Art Unit: 3689

Chislenko discloses using the date of contact for preferences and giving the most recent preference because they may "drift" over time (col 5, lines 9-15).

It would have been obvious to one of ordinary skill in the art to modify the system as disclosed by Wanker with the dating scheme as taught by Chislenko as Chislenko discloses that opinions may change over time and this would make the suggestions more precise and accurate.

Response to Arguments

Applicant's arguments with respect to the claim objections and rejection under 35 U.S.C. 112 have been fully considered and are persuasive. The objection and the rejection under 35 U.S.C. 112 have been withdrawn.

Applicant's arguments filed 11/22/10 with respect to the rejections under 35 U.S.C. 103 have been fully considered but they are not persuasive. As to arguments that the prior art does not take prior contacts into consideration, the examiner disagrees and further, this is addressed in the rejection, "...including contacts with prior dealers and their results (274, as best seen in fig 2F), ... using historical data about contacts between a plurality of prospective customers and the dealer (fig 2G, in total but especially box 283), the reason is "located" (fig 2G)...". As can be seen, this limitation was addressed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL J. FISHER whose telephone number is (571)272-6804. The examiner can normally be reached on Mon.-Fri. 7:30am-5:00pm alt Fri. off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janice Mooneyham can be reached on 571-272-6805. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
